

NAZYM ZHIYENGALIYEVA

San Francisco, CA | nazym@uni.minerva.edu | [LinkedIn](#) | [Github](#) | [Website](#)

EDUCATION

Minerva University

B.S., Computational Sciences (Math track), GPA: 3.6 / 4.0

Expected May 2027

San Francisco, CA

Coursework: Data Structures & Algorithms, Calculus, Linear Algebra, Real Analysis, Bayesian Statistics, Optimization Methods, Statistical Mechanics, Quantum Mechanics

EXPERIENCE

Gusto

May 2026 – Aug 2026

Software Engineering Intern

San Francisco, CA

- Built the interface layer for an internal AI support assistant, letting it respond with interactive UI (tables, cards, one-click actions) instead of plain text, across three production codebases (React, TypeScript, Rails).
- Hardened the assistant's output against malformed AI responses with 140 renderer and type-guard tests, keeping the feature stable in production.
- Shipped a one-click action drafting customer emails into the Salesforce composer, collapsing 4+ tools and 8+ manual steps into a single UI for support advocates; 24% click-through in week one.

Nutrix AI

Oct 2025 – Dec 2025

Software Engineering Intern

Buenos Aires, Argentina

- Designed and shipped 4 end-to-end product features across a Go GraphQL backend and a React/TypeScript frontend, including gamification systems and saved recipe workflows.
- Integrated LLM-powered recipe generation, iterating on prompt structure and output reliability; debugged production issues across resolver logic, frontend state, and Firebase integrations.

Jubo Health Technologies

Sep 2024 – Dec 2024

Software Engineering Intern

Taipei, Taiwan

- Implemented domain-specific query functions for N-Copilot, an LLM-powered natural language query system over HR and EHR datasets serving workforce, financial, and operational metrics for 50,000+ residents.
- Contributed to the natural language-to-database pipeline on an LLM and GenAI Gateway architecture, validating each module against test suites before deployment.

LEADERSHIP, RESEARCH & TEACHING

Minerva Math Modeling Research Group

Jan 2026 – Present

Research Intern

Remote

- Implemented and validated Python FEM solvers for incompressible Navier-Stokes flow, including a mesh generator with local-to-global index mapping.

Google Developer Groups, Minerva University

Jan 2025 – May 2025

Tech Lead

Remote

- Mentored 3 student teams in React and other technical work; ran workshops for 30+ members.

Minerva University

Sep 2025 – Apr 2026

CS113 Linear Algebra Teaching Assistant

Remote

- Hosted weekly office hours and mock oral exams for 100 students; graded assignments with structured written feedback.

PROJECTS

GPT from Scratch | *Python, PyTorch* | [GitHub](#)

2025

- Trained a transformer language model built from scratch in PyTorch, covering tokenization, multi-head self-attention, positional encoding, and autoregressive generation on a literary corpus.

AI Adoption Assessment | *React, JavaScript, LLM API* | [Demo](#)

May 2024

- Built a full-stack tool for the Mastercard Internship Program assessing banks' AI maturity: a React frontend that scores survey responses via LLM APIs and generates a structured, downloadable report.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Go, Ruby, SQL, Swift

Frontend & Backend: React, Three.js, Node.js, Ruby on Rails, FastAPI, GraphQL, HTML, CSS

Testing & Quality: Unit and integration testing, type-guard testing, LLM eval design, product telemetry (Amplitude)

Databases & Tools: PostgreSQL, MySQL, MongoDB, Firebase, Git, Figma, Vercel, Postman

AI & ML: PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, LangChain, Langfuse, Claude Code (agent workflows)
